

Do you work with TBI patients?

You may be eligible for a qualitative study conducted at the University of Toronto via Zoom

About the study:

- We are investigating current physical therapist (PT) perspectives on using mobile app technology for monitoring mobility in TBI patients
- We would also like to know what kind of features/ capabilities that PTs believe the apps should contain
- We are also looking into PT perspectives of the facilitators and barriers that PTs believe exist regarding implementing technology into clinical practice

Rationale:

- The implementation of technology has been shown to improve self-management and patient outcomes in different neurological populations
- Little research has discussed physical therapist perspectives on using technology for assessment in the TBI population

What the study involves

- Completion of a demographic survey
- 1 60-90 minute interview through Zoom

Participants will be entitled to a 50\$ e-gift card
