

# Characterization of Mineralization and Alteration of the Kinkaid Project, Mineral County, Nevada

MSc. Candidate: Nina Buchanan

Supervisor: Dr. Pete Hollings

The Kinkaid Project is a gold and copper prospect with historic mine workings located within the Walker Lane in Mineral County, Nevada. My research will include describing the volcanic rocks, characterizing the mineralization and alteration, and determining the relationship between the two.

Alteration will be classified using short-wave infrared analysis and LA-ICP-MS mineral chemistry.
