D.W.Malloch (available from instructor).

Course Content: The structure, classification and biology of fungi and their importance to human society (*e.g.* industry, agriculture, health) and to the natural ecosystem. Emphasis will be placed on the various factors influencing the ecological success of fungi (*e.g.* discharge and dispersal of propagules, the substrate and it's influence on growth and development). This will be highlighted by examining in detail various lifestyles exhibited by fungi (as saprotrophs, as symbionts, as parasites and predators) and their interactions with other organisms (especially plants, insects, and other fungi). HOWEVER, BE WARNED, THIS IS A FAIRLY HEAVY COURSE. DON'T TAKE THIS COURSE IF YOU ARE LOOKING FOR AN EASY ELECTIVE!
