

KINESIOLOGY/BIOLOGY 3010
Physiology of Exercise I
Fall 2016

Lakehead
UNIVERSITY

School of
Kinesiology

Professor: Ian Newhouse
Office: SB 1017
Phone: 343-8074
Email: Ian.Newhouse@lakeheadu.ca
Office Hours: by appointment

Teaching Assistants: Kenny Groop
(kgroop@lakeheadu.ca) and Leigh Jeffries
(ljeffrie@lakeheadu.ca)

4th yr student assistants: Dominique Cava,
Ofer Mogilnicky, Mikayla Nickle, Lauren
Macgillivray, Kyle Migliazza, Kylee Kuchta,
Sean Carter, Lucas Giardino, Sara Potter

TIMES:

Lecture Times:

Tues/Thurs

8:30 – 10:00

RB 1042

Lab Times:

F1 Friday (wk 1)
or F2 Tuesday (wk 1)
or F3 Wednesday (wk 1)
or F4 Friday (wk 2)
or F5 Tuesday (wk 2)
or F6 Wednesday (wk 2)

8:30 - 10:30 SB 1025
10:30 - 12:30 SB 1025
12:30 - 2:30 SB 1025
8:30 - 10:30 SB 1025
10:30 - 12:30 SB 1025
12:30 - 2:30 SB 1025

CALENDAR DESCRIPTION:

A study of principles of physiology as they apply to human movement. Topics discussed include: training principles, energy metabolism, characteristics of skeletal muscle, neurological aspects of human movement, muscle contraction and fatigue, respiration and circulation. Laboratory sessions expose students to the techniques used in measuring the energy systems.

Prerequisite(s): Chemistry 1210, Biology 2011, 2012 and 2030

COURSE FORMAT:

Lecture and lab

LEARNER OUTCOMES:

At the conclusion of this course students will be able to explain the biochemical and physiological adaptations which occur in the human body to meet the acute and chronic demands of different types of exercise and work. More specifically they will be able to:

- Apply the principles of training to a sport or rehabilitation setting
- Explain, with various examples, how the body maintains homeostasis during both acute and chronic exercise
- Discuss the biochemical pathways involved in aerobic and anaerobic energy production
- Explain how exercise intensity and duration affect fuel selection

- Identify the site of release, stimulus for release and predominant action of various hormones, particularly in the context of exercise and training
- Discuss the general organization of the nervous system and how we control movement
- List the chain of events that occur during muscular contraction
- Provide an overview of the design and function of the respiratory and circulatory systems
- Integrate most of the physiological concepts discussed in this course
 - A) into a one page performance model for a sporting event of your choice
 - B) into an essay to explain where ATP comes from.

EVALUATION:

<u>Item</u>	<u>Weighting</u>	<u>Due Date</u>
1. TCPS Certificate	NA	Prior to first lab
2. Lab write ups for labs 2-5	4X8%	At start of your next lab
3. Mid-term exam	25%	October 20
4. Reflection assignment	5%	November 1
5. Performance model	5%	November 24
6. Final exam	33%	TBA (Dec 8-18 period)

TRI-COUNCIL POLICY STATEMENT TUTORIAL CERTIFICATE (TCPS)

Although data collected during our labs is for teaching purposes (as opposed to research) it is still a requirement that all students in the labs complete and submit to the instructor the TCPS 2 Certificate. <http://www.pre.ethics.gc.ca/eng/education/tutorial-didacticiel/> . Once you have completed the tutorial (takes ~3 hours) you need to print the certificate with your name on it and email it to the instructor prior to your first lab. Late penalties will apply and be counted towards your lab mark. This certificate can be used for other courses so keep a copy.

REFLECTION ASSIGNMENT

Some background reading on this is provided under “reflective learning” on our D2L site. For this assignment, I would like you to critically reflect on how you did on the midterm in this course. My hope is that in doing this you will appreciate that critical inquiry into why you perform the way you do on an exam mirrors the way I would like you to critically inquire throughout the physiology course (i.e. always be asking why something causes something to happen). This will be similar to the performance model (see below) except it is applied to your midterm exam. Other objectives of the assignment are that it may improve your metacognitive abilities (i.e. your ability to analyze how you learn) which may lead to lessons learned on how best to prepare for subsequent exams. A final objective of this assignment is that it will allow me to find out what is working and what isn't.

As this is just a 5% assignment, my expectations are for a one page, single spaced, typed submission. Remember, as noted in the posted article, that a good critical reflection includes "(1) linking past, present, and future experience; (2) integrating cognitive and emotional experience; (3) considering the experience from multiple perspectives; (4) reframing; (5) stating the lessons learned; and (6) planning for future learning or behaviour." You should note that I will be the only one marking these assignments and information will be kept confidential. A marking rubric I will use is also in the D2L site.

PERFORMANCE MODELS

This will become clearer as I will present a couple models in class. What I would like you to do is think of your own sport and try to depict on one piece of paper the numerous factors that contribute to a good performance (or conversely to a poor performance). You are free to pick just one skill within that sport (eg. doing a drive in golf), or assess the whole performance (eg. running a 10 mile road race). While all variables (psychological, environmental, tactical, equipment etc) can be noted, emphasis for our purposes will be on physiological variables. While complicated, your model should also make an attempt at showing how some of these variables inter-relate.

REQUIRED TEXT AND READING MATERIAL:

Required:

Powers and Howley, Exercise Physiology, Theory and Application to Fitness and Performance, 9th Ed. McGraw-Hill, 2014

Lab manual documents and other readings are all on the D2L site

LABORATORIES:

Refer to the D2L site for detailed information.

Participation - Attendance at all scheduled labs is mandatory. Each unexcused absence (that is, without a medical or family emergency, will result in a 5% grade reduction for each absence). More than two unexcused absences will result in a grade of "incomplete" and the student will be required to retake this course. It is important for students to attend the lab section they are assigned to. If there are extenuating circumstances that require you to miss a lab, we will try to accommodate you in another lab section, but only if you notify the teaching assistant prior to your scheduled lab.

ADDITIONAL COURSE INFORMATION:

Regulations and Policies: The School of Kinesiology has adopted a series of policies that apply to all courses. Students are expected to be familiar with these policies and to abide by them. The course policy document may be found on the School of Kinesiology website at: <http://kinesiology.lakeheadu.ca/>.

Accommodations: Lakehead University is committed to achieving full accessibility for persons with disabilities. Part of this commitment includes arranging academic accommodations to ensure that students with disabilities have an equitable opportunity to participate in all of their academic activities. If you may need accommodations, please contact Student Accessibility Services (SAS – <http://studentaccessibility.lakeheadu.ca/>) and register to access these services.

Late penalty: For all assignments and labs there is a standard late penalty of 1% (of final grade) for each day late.

DETAILED COURSE SCHEDULE:

LECTURE OUTLINE		CHAPTERS IN TEXT
Week 1	Introduction/Training Principles	NA (on D2L)
Week 2	Control of the Internal Environment	2
Week 3	Bioenergetics	3
Week 4	Exercise Metabolism	4
Week 5	Hormonal Response to Exercise	5
Week 6	The Nervous System	7
Week 7	Skeletal Muscle	8
Week 8	Circulatory Response to Exercise	9
Week 9	Circulatory Response to Exercise	9
Week 10	Respiration During Exercise	10
Week 11	Performance Models	19
Week 12	Review	

SCHEDULE FOR THE LABORATORY EXPERIENCES:

Two weeks starting September 12th Lab 1 - Baseline Measures

Baseline measures in exercise physiology

- measuring blood pressure
- heart rate
- body mass index (BMI)
- waist to hip ratio
- body fat percentage (fat calipers)
- Rockport walk test

Note that there is not a required write-up for this first lab

Two weeks starting September 26th Lab 2 – Strength Measures

Strength measures in exercise physiology

- partial curl-ups
- right-angle push-ups
- sit and reach flexibility test
- handgrip strength test
- Coopers 12-minute run test
- Canadian Aerobic Fitness Test (Step Test)

Two weeks starting October 17th Lab 3 – Measuring Maximal Oxygen Consumption (VO₂Max)

- A demonstration of a VO₂Max test → Bruce treadmill protocol
- A predictive VO₂Max test → Leger 20m Shuttle Run test

Two weeks starting October 31st Lab 4 – Measuring Anaerobic Power

- A demonstration of a maximal anaerobic power test → Wingate bike test
- Two anaerobic field tests → the Margaria-Kalamen Power test
- Vertical Jump test.

Two weeks starting November 14th Lab 5 – Measuring Exercise Stress

Measuring exercise stress on the lower and upper body by completing two exercise tests

- Cycle Ergometer—Astrand Rhythmic Nomogram approach
- Arm Crank Ergometer—Modified Astrand Rhythmic approach for arm work

Note that this final lab write up will be submitted to your TA two weeks after the lab.
