

Lakehead University

Biostatistics (Biology 3112, 5171), Winter 2019

Instructors:

Lecturer: **Dr. Michael Rennie**

Office: CB 4050

Phone: 807-346-8760

e-mail: mrennie@lakeheadu.ca

Office hour: Monday, 1:00-2:00 pm

TA (Thunder Bay): **Andrew Milling**

Office: CB 4030

Phone: 807-343-8043

e-mail: amilling@lakeheadu.ca

Office hours: Monday 1-2, CB 4058

TA (Orillia): **Hannah Hancock**

Office: OA 3003

Phone: x 2634

e-mail: hmhancoc@lakeheadu.ca

Office hours: Monday 12:30-1:30

Text (recommended):

Experimental design and data analysis for biologists.

G. P. Quinn and M. J. Keough, 2002. Cambridge University Press. ISBN: 0 521 00976 6

Class Schedule:

LECTURES: Thunder Bay: Monday and Wednesday, 11:30 am to 1:00 pm, AT 1010

Orillia: OA2006

TUTORIALS: Thunder Bay: Tuesdays 12:30-2:30 pm, AT 4019

Orillia: Wednesdays 12:30-2:30

Lecture Schedule (tentative, will adjust topics as required):

Lecture (L) or Tutorial (T) #	Date	Topic	Recommended readings
	Jan 7	SNOW DAY	Trashy romance novels or Douglas Adams Hitchhikers Guide to the Galaxy
L1	Jan 9	I'm a biologist/ecologist/ environmental scientist: what am I doing in a statistics class?	Chapter 1; Chapter 2 up to section 2.3 and 2.4.2; Chapter 3 up to section 3.7; Chapter 4, Chapter 19.

Lecture (L) or Tutorial (T) #	Date	Topic	Recommended readings
		<i>Introduction to R</i>	
T-Intro	10	<i>Tutorial- getting comfortable with R^l</i>	
L2	14	Correlation, linear regression, model II regression	Chapter 3 to section 5.3.15; section 5.4, 5.7.
L3	16	Multiple regression (Assignment 1 posted)	Chapter 6 to section 6.1.5
T1	17	<i>Correlation, regression</i>	
L4	21	Single factor ANOVA, unplanned contrasts	Chapter 8 to section 8.1.5; section 8.3, 8.4
L5	23	Type I and II error rates; planned contrasts (Assignment 1 due)	Section 8.6, Chapter 3, especially section 3.2; Box 8.4 has a worked example
T2	24	<i>Single factor ANOVA</i>	
L6	28	Random effects (Assignment 2 posted)	Section 8.2.1
L7	30	Experimental design	Chapter 7 up to and including section 7.2
T3	31	<i>Estimating variance components</i>	
L8	Feb 4	Nested ANOVA (Assignment 2 due)	Chapter 9 to section 9.1.9
L9	6	Nested ANOVA, Randomized block design Practice midterm posted (Assignment 3 posted)	Chapter 10 to section 10.10, 10.14
T4	7	<i>Nested ANOVA</i>	*grad students meet with Dr. Rennie about final projects
L10	11	Factorial ANOVA; Mixed effects models (the old way)	Section 9.2, up to 9.26; 9.28; 9.2.11; 9.4, 9.5
L11	13	Unbalanced designs in ANOVA; appropriate Sums of Squares Review practice midterm (Assignment 3 due)	Pages 242-244, section “Unequal sample sizes” *poll for topics last 2 weeks of class
T5	14	<i>Blocked design</i>	

Lecture (L) or Tutorial (T) #	Date	Topic	Recommended readings
	18-22	READING BREAK	
MIDTERM	25	MIDTERM	*grad students submit 1-2 page proposal
L12	27	Statistical power (Assignment 4 posted)	Sections 5.6, 8.9, 9.2.13, 10.10
T6	28	<i>Factorial ANOVA, working with "real" data; midterm questions</i>	
L13	Mar 4	Multiple testing	Section 3.4
L14	6 (25% of mark needed)	Test for heterogeneity of slopes, Analysis of Covariance, comparisons of adjusted means (Assignment 4 due)	Chapter 12, to section 12.4; section 12.5, 12.6, 12.8
T7	7	<i>Power analyses, Multiple comparisons</i>	
L15	11	It's all just general linear modelling, man (this is where we blow your mind); dummy variables	Section 6.1.14
L16	13	Tests of frequencies	Chapter 14, to section 14.2.2
T8	14	<i>Comparing slopes, ANCOVA</i>	
L17	18	Non-parametric tests	Section 3.3.3, section 5.1.2, Section 8.5.2, 10.5
L18	20	Randomization- permutation tests (Assignment 5 posted)	Section 3.3.2; readings to be assigned
T9	21	<i>Frequency tests; Traditional non-parametric tests</i>	
L19	25	Randomization- bootstrapping tests	
L20	27	Generalized linear models*	Chapter 13 to up to and including section 13.3; assigned reading
T10	28	<i>Randomization</i>	
L21	April 1	Mixed effects models* (the	

Lecture (L) or Tutorial (T) #	Date	Topic	Recommended readings
		new way)	
L22	3	Model selection criteria* (a requiem for the p -value) (Assignment 5 due) and REVIEW	Assigned reading
T11	4	GLMs and GLMMs* and REVIEW	
	Monday, April 8th (5:00 pm)	Grad student projects due	
	Date TBA	Final Exam (Location TBA)	

¹The tutorial this week will be, in part, self-directed; students are strongly encouraged to load R and Rstudio on their personal computers so they can work on assignments, etc. at home (Please make time to complete this task during the first week of classes). Students will go through the introductory R code presented in lecture on Jan 11th, on the machines in AT 3001 and at home using their personal computers.

*topics during the final 3 lectures and in the last tutorial may vary from this depending on student interests; can be customized if there are specific analyses that the class would like to address.

Assignments: There will be five assignments that are to be completed outside of classes. These will all consist of independent analyses of data sets and a written report for grading. The four assignments in which you do best will be counted in your final grade.

Tutorials: Each week there will be a two-hour tutorial in which you will get practice solving statistical problems using a computer and get comfortable using R. You are not required to submit anything for grading. These are also great opportunities to pick the brain of your TA, instructor, or peers on assignments.

Policy on late assignments or missed work: Failing to submit academic work on time is a serious matter. Students should arrange their schedules so that academic work is a top priority during the school year. *Because only four of the five graded assignments will count towards your final mark (see below), NO medical reasons for failing to submit an assignment on time will be accepted except under the most serious circumstances. A grade of 0 will be assigned to any late or missed assignments.* There is only one term test and only the most urgent medical matter will be accepted as a reason for missing the term test. The only acceptable document for medical emergencies is the ‘Lakehead University Medical Certificate’ and can be found here, along with instructions and requirements of such exemptions: <https://www.lakeheadu.ca/current-students/examination/medical-notes>.

Email: In order to receive important course communications, **it is absolutely necessary** that you monitor notices on the course website at least twice a week.

Grading (undergraduates):

1. Best four out of five assignments, 10 points each [40%]
2. Term Test, February 17 [20%]
3. Final Exam [35%]
4. Student engagement (in class, in tutorials, participation on discussion forums, etc) [5%]

(Calculators- NOT phones with calculators, but old-school calculators with no additional functionality- are allowed for term test and final exam, but no other materials)

***Grading (graduate students):** *Graduate students will not write exams.* Assignments will be completed by graduate students, based on the same policy described above. In place of exams, graduate students will meet with the instructor to discuss an appropriate analysis for a dataset of their choosing, and will submit a report at the end of term describing the statistical approach. **A 1-2 page proposal** outlining the dataset and the planned analysis will be submitted around the time of the midterm, **worth 10% of the final grade.** The **final report will be worth the remaining 40%** of the final grade, and will loosely follow a typical scientific report (abstract, introduction, methods, results, discussion), but a heavy emphasis will be placed on the methodological choice of analysis selected in relation to the data set and experimental design, reporting of results and interpretation of the analysis. Appendices should be included to provide sufficient evidence that assumptions have been tested and have informed the analytical approach presented. Students are encouraged to use their own data for this assignment; if this is not possible, contact the instructor for alternatives. **The remaining 10%** of the course grade for grad students will be for **class participation, and they are expected to have a greater level of engagement.**

Course web page: There will be a course web page through myCourseLink. Stay tuned as I figure out how it works, but it will be a place to find lectures in .pdf format, R code, assignments, and discussion boards.

Discussion board and e-mail policy: Separate forums will be set up for the course in general, R-related questions and possibly additional forums for particular topic areas. Any questions regarding course organization, e.g., assignments, due dates etc. as well as questions regarding course content, e.g., statistical questions, should be posted to the appropriate forum. Students are invited to help answer questions posted to the discussion board as far as possible, particularly with regards to R-help (the best way to learn something yourself is to show someone else how to do it). Entries will be monitored by the course staff and annotated as necessary within two days from posting, and major issues will be addressed in class or during the tutorials. Please keep your questions and answers short and precise and be polite! Using the discussion board gives all students access to the same information. Therefore, the instructor will not answer individual emails about course organization or content, e.g., statistical questions. Students should only send emails to the instructor regarding personal issues that cannot be posted on the discussion board. Emails will usually be answered within two days (three days over weekend).

For help with R:

1. Begin by referring to the documents you have been provided with- the “getting started with R” lecture notes; “An introduction to R”, by Venables, Smith and the R Development Core Team, available for download on the course website; other resources on the CRAN contributed documents (<http://cran.r-project.org/other-docs.html>); all of this stuff is free.
2. Search google with [R] in your search term; e.g. “[R] t-test”. Sift through the search results till you find something helpful, most often on the first page or two.
3. Try “?topic” where “topic” is the function or issue you are having with, or `help.search(topic)` if it’s not a function, but something else.
4. Post a question on the R-discussion forum on the course website. Wait for a student to post an answer (may be annotated by course staff within 2 days).
5. If still not answered, ask your TA in the tutorial session.
6. If STILL necessary, ask the instructor after class or during office hours.
