

BIOLOGY 4512WA
PLANT PROPAGATION

WINTER 2014

Dr. Peter Lee

Printed January 22, 2014. Fixed broken links in Lab 3, Grafting

Contents

About the cover	6
Lecture schedule for 2014	8
Laboratory schedule for 2014	9
Mark allocation	10
Due dates	13
General Introduction	14
1 Propagation Facilities and Tools of the Trade	18
1.1 Objectives	18
1.2 Materials	18
1.3 Methods	18
1.4 Overview	18
1.4.1 Sanitization	19
1.4.2 Propagation media	20
1.4.3 Tools of the trade	21
1.4.4 Watering techniques	22
1.4.5 Safety	22
1.5 Report	23
1.6 Fact sheet assignment	23
2 Propagation Media and Stem Cuttings	24
2.1 Objective	24
2.2 Introduction	24
2.3 Materials	25
2.4 Methods	26
2.4.1 Set-up	26

2.4.2	Take-down	27
2.5	Report	29
3	Grafting Techniques	30
3.1	Objectives	30
3.2	Introduction	30
3.3	Materials	31
3.4	Methods	31
3.5	Report	33
4	Propagation by Air Layering	35
4.1	Introduction	35
4.2	Materials	35
4.3	Precautions	36
4.4	Methods	36
4.5	Report	37
5	Determining Soil Toxicity	40
5.1	Objectives	40
5.2	Introduction	40
5.3	Materials	41
5.4	Methods	42
5.5	Useful Tips	43
5.6	Report	45
6	Determining Some Basic Soil Parameters	46
6.1	Objective	46
6.2	Introduction	46
6.3	Materials	46
6.4	Methods	47
6.4.1	Part 1: General chemistry	47
6.4.2	Part 2: Soil extractions	48
6.5	Report	49
7	Micropropagation (Tissue culturing)	50
7.1	Objectives	50
7.2	Introduction	50
7.3	General Materials	51
7.4	Experiment 1–Surface Disinfestation of Vegetative Tissue	52

7.5	Materials	52
7.6	Procedure	53
7.7	Experiment 2–Establishment of proliferating shoot cultures	54
7.8	Materials	54
7.9	Procedure	54
7.10	Report	55
8	Propagation via Seeds	57
8.1	Objectives	57
8.2	Introduction	57
8.3	Materials	58
8.4	Method	59
8.5	Report	60
9	Facilitated Poster Presentation	61
9.1	Objectives	61
9.2	Introduction	61
9.3	Methods	62
9.3.1	Title and Authors	62
9.3.2	Aim/Objective	62
9.3.3	Introduction	62
9.3.4	Optional Headings	63
9.4	More Useful Advice	63
10	Tour of Commercial Greenhouse	64
10.1	Objective	64
10.2	Introduction	64
10.3	Materials	64
10.4	Methods	64

About the cover

Class of 2014 successfully air layering a *Ficus* sp.

Acknowledgments

Growth chambers, glassware, soil analysis, Standard Operating Procedures (SOP) and technical assistance are provided to students courtesy of Lakehead University Environmental Laboratory (LUEL). LUEL is an ISO17025 laboratory accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA). For more information about the lab you can visit their website at <http://lucas.lakeheadu.ca/luel/>. Job opportunities in the lab may be available through Dr. Lee's research funding or the [Lakehead University Work Study Program](#). If interested, drop a resume off to CB3022 any time!

Lecture schedule for 2014

Classes begin		January 6
Week 1	Introduction to and History of Plant Propagation	January 6
Week 2	Propagation Environment; Biology of Propagation	January 13
Week 3	Propagation Environment; Grafting	January 20
Week 4	Soil Characteristics and Plant Nutrition	January 27
Week 5	Test 1 and Propagation by Cuttings	February 3
Week 6	Propagation Techniques-cuttings, layering	February 10
Mid-year Study Week	NO CLASSES	February 17
Week 7	Micropropagation Principles	February 24
Week 8	Micropropagation Techniques and Test 2	March 3
Week 9	Seed Production and Propagation Principles	March 10
Week 10	Seed Production and Propagation Techniques	March 17
Week 11	Vegetative Propagation Techniques-bulbs, corms, tubers, rhizomes and Test 3	March 24
Week 12	Commercial Tour of Greenhouse	March 31
Last day of classes		April 4
Examination period		April 7-17

Laboratory schedule for 2014

Classes begin		January 6
Lab 1	Intro and Facilities Tour	January 8
Lab 2	Substrates and Cuttings	January 15
Lab 3 & Lab 4	Grafting & Air Layering	January 22
Lab 5–setup; Quiz 1	Soil Toxicity	January 29
Lab 2–take down	Substrates and Cuttings	January 29
Lab 6	Soil Chemistry	February 5
Lab 5–take down	Soil Toxicity and Chemistry	February 12
Mid-year Study Week	NO CLASSES	Feb 17–21
Lab 7–start; Quiz 2	Micropropagation/Tissue culture	February 26
Lab 7–con’t	Micropropagation/Tissue culture	March 5
Lab 8—start	Seed treatments	March 12
Lab 9–PRESENTATIONS	Facilitated Poster	March 19
Lab 7 & Lab 8–end	Micropropagation/Tissue culture	March 26
Lab 8–end; Lab 3, 4–end	Graft, air layer, seeds	March 19–31
Lab 10; Quiz 3	Tour of commercial greenhouse	April 2
Lab books	Random evaluations	ANY LAB DAY!
Last day of classes		April 4
Official examination period		April 7–17

Mark allocation

Break down of marks for this course are as follows:

LABORATORY	50%
LECTURE	50%
COURSE TOTAL	100%

The **lecture component** will be evaluated as follows:

Term Test 1	10%
Term Test 2	10%
Term Test 3	10%
Facilitated Poster	20%

All **term tests** will be written during class (dates to be determined).

The **facilitated poster presentation** must involve some scientific aspect of plant propagation that is of regional interest to local populations and/or issues in northwestern Ontario. Your proposal or “pitch” for the region **MUST** be realistic and commercially viable. Presentations are conducted by groups of students. Consult with Dr. Lee concerning potential topics **BEFORE** starting. Basically, you are to create a poster on your proposal and orally present the information to the class and guest judges. Your ability to disseminate information now will prepare you for future student poster competitions at conferences! Further details are presented in Lab 9. A marking rubric will be posted on Desire to Learn (D2L).

The **laboratory component** will be evaluated as follows:

Assignment	5%
Formal Lab Reports	30%
Quizzes	5%
Lab Notebook	10%

Assignment 1 will be marked on a rubric posted on D2L. You will create a **one page factsheet** on a randomly drawn plant/greenhouse pest or disease. Students are to include references on a separate page. You should follow the referencing format used in the [Canadian Journal of Plant Sciences](#) (see the [instructions for authors](#) page), although some modifications are allowed. See Section 1.6 and D2L for additional submission information.

Formal laboratory reports are required for **Propagation Media and Stem Cuttings** (Lab 2), **Soil Toxicity and Soil Chemistry** (Lab 5 and Lab 6, combine data) and **Seed Treatments** (Lab 8). Marking rubrics for lab reports will be posted on D2L. Keep your reports short and to the point! Students should closely follow the scientific method; ask a question or propose a hypothesis, test it, present your findings (data) and discuss their implications. Lab reports are to be typed and formatted as per the Canadian Journal of Plant Science, converted to PDF format and submitted electronically. This includes line numbering! Use headings and sub-headings as required (e.g. Materials and Methods, Results, Discussion). Label all figures and tables and be sure to reference them in the body of your report. Remember, figure captions are on the bottom, table captions are on the top. **DO NOT** use vertical lines in tables and reserve horizontal lines for top and bottom rules and header rows. Figures and tables may be embedded in the text or placed at the end as per journal guidelines. Please consult scientific journals and review some peer reviewed literature for further writing style conventions. Additional information is provided in the Report Format Section below. “Writing coaches” may be available through the library.

There will be a few **quizzes** throughout the term. These will be on materials found in this laboratory manual **AND** on materials posted to D2L deemed relevant to the lab. Quizzes are designed to test your knowledge of lab concepts **BEFORE** the lab takes place. Ideally, you should review all labs in this manual before coming to lab!

Quiz 1 will concern the **Soil Toxicity Lab (Lab 5)**. You should review the Environmental Protection Series document (EPS, 2005) so you understand the test procedures and some basic terminology. **Quiz 2** will concern the techniques involved with **micropropagation** (Lab 7). You should review your textbook and lecture materials in addition to this lab manual. **Quiz 3** will concern the **tour of a commercial greenhouse** (Lab 10). You **MUST** attend the tour to receive full credit for the quiz. The delivery of the quizzes may occur during the actual lab time slot or may be distributed via D2L.

You **require a hard covered lab notebook BEFORE Lab 1**. There may be some free ones available during the first lecture (first come first serve), otherwise they are available in the bookstore. Prepare your lab book by first numbering each page. Never remove pages of a lab notebook! Lab notebooks will be marked for completeness of observations and answers to questions posed in the text of this manual. Students are encouraged to read lab instructions and research techniques in advance, jotting notes in their books. Inclusion of tables and simple sketches are encouraged.

Lab notebooks will be randomly assessed throughout the term; **YOU WILL NOT RECEIVE PRIOR NOTICE OF LAB BOOK EVALUATIONS**, so bring your lab book to every lab!

Late assignments and lab reports are subject to a **10% penalty per day (including weekends)**! Assignments and laboratories are due by the date posted in the lab manual. An exact time will be indicated by the Teaching Assistant and/or in D2L (usually 11:59 pm). The system will allow you to submit late, but you will still be assessed the late penalty.

Assignment, Report, Term Test and Quiz Due Dates

Assignment 1 (Common Pests and Diseases; Section 1.6)	January 22
Quiz 1 (Pre-lab soil toxicity Lab 5)	January 29
Term Test 1	February 5
Lab Report 1 (Substrates and Root Cuttings Lab 2)	February 12
Quiz 2 (Micropropagation Lab 7)	March 5
Term Test 2	March 5
Lab Report 2 (Soil Chemistry and Toxicity- Labs 5-6)	March 12
Presentations	March 19
Term Test 3	March 31
Lab Report 3 (Seed Treatments-Lab 8)	April 4
Quiz 3 (Post Lab 10)	April 9
Lab notebook	Any lab period
