

GEOGRPAHY 4451 – ENVIRONMENTAL RISK AND HAZARDS

Group Project Self-Evaluation Form

Full Name: _____

Here is how it works. A grade (A, B, C, etc.) is assigned (*by me*) to your group project. You grade *yourself* and *your co-worker or workers* using the evaluation form (see link below). I calculate the average score for each individual in a group and the individual's score is compared to the group mean. (Actually, standard deviations are used to score each student's grading). If you score higher than the group mean, your project grade is increased. If you score lower than the group mean, your project grade is decreased.

The evaluation form gives you general guidance on how to evaluate aspects of group work. It should also give you insight into what is expected of you if you want your group project grade increased rather than decreased.

Please rate each of the members in your group (*including yourself*) with regard to their contribution to your course project on a scale of from 0 to 4 using the following criteria matrix.

	Ability to Work with the Group	Amount of Effort	Dependability	Intellectual Contribution	Overall Contribution to Project
0	Never showed up disruptive of the group process	None	Wasn't / Never turned in anything	Never said anything	None
1	Participated, but in a different direction than the group		Got things done, but usually late		Minimum
2	Okay	About what was expected	Usually got things done on time	Was helpful	Average
3	Always participated and let others too		Always got things done on time		Above Average
4	Helped get the group moving without dominating	Did the whole thing	Could be counted on to pick up the slack	Provided thoughtful, meaningful suggestions	Wouldn't have been possible without

BE SURE TO EVALUATE YOURSELF, AND EACH GROUP MEMBER

FULL STUDENT NAME	Ability to Work with the Group	Amount of Effort	Dependability	Intellectual Contribution	Overall Contribution to Project
