Your ability to write clearly and concisely will in large part determine your overall mark in this class.

COURSE DESCRIPTION:

This techniques course focuses on map construction and interpretation techniques, and air photo acquisition, interpretation, and photogrammetry using vertical air photos. Various applications will be explored through lectures and practical lab exercises.

^{*}Absences from illness, compassionate reasons or representing the university off-campus, supported by written documentation, will be accepted as sufficient evidence to allow a rewrite of a missed test or an extension on an assignment. Missed tests for any other reason, including undocumented illness, may be made up at a date and place to be determined. This test will consist of full-length essay questions and will be tougher than the original. Extensions will not be allowed for assignments, other than for legitimate reasons supported by written documentation. All other late assignments will lose 10% of the available mark for each day late.

^{**}Please read the rules on plagiarism, these are online...go to the LU Calendar, then University Regulations, and then to Academic Dishonesty.
