

Geography 3315/ Geology 3130

Glacial Systems

Winter Term, 2020

Instructor: Dr. Kamil Zaniewski
Office: RC-2006F
Tel.: 343-8472
e-mail: kamil.zaniewski@lakeheadu.ca

Lectures: Mondays and Wednesdays at 10:00 – 11:30 in RB-1047

Course Description:

This course is an introduction to the topics of glaciology and glacial geomorphology. The understanding of the topic helps in our understanding of the geomorphology of approximately 30% of land surface that is, or has been affected by glaciation recently. It also helps us understand the relationships between ice and global, and local, hydrology. The impact of global climate change will be most visible in the changes observed in glacial landscapes but the impact of those changes will be felt across the globe – especially in coastal communities.

In this course we will study the nature and behaviour of glacial ice – the physics of ice formation (ex. mass balance) and movement. We will learn how glacial ice impacts the landscapes and to what extent. We will consider glacial landforms – depositional and erosional, and will learn how they are formed and under what conditions. Differences between alpine and continental glaciation – the process and the landforms – will also be highlighted.

We will also learn about the glacial history of the planet. Special emphasis will be placed on the glacial history of Canada and Northwestern Ontario.

Course Objectives:

Students will be expected to show thorough understanding of the following glacial systems concepts:

- Glaciers and Glacier Dynamics
- Distribution of Glaciers (modern and historical)
- Glacial Erosion
 - Processes
 - Landscapes and Landforms
- Glacial Deposition
 - Processes
 - Landscapes and Landforms

Glaciofluvial processes
Erosion
Deposition
Landforms

Time permitting:

Glacial history of Northwestern Ontario

Textbook (optional readings):

Glaciers & Glaciation, 2nd Edition
Benn, D.I. and Evans, D.J.A., 2010, Hodder Education, 802 p.
Paterson Books - 3rd Floor GB 2403.2 B44 1998

Glaciers and landscape : a geomorphological approach.
David E. Sugden, Brian S. John.
Paterson Books - 3rd Floor GB 2403.2 S9 1976

Assignment topics:

1. Snowpack survey.

This assignment will involve active monitoring – data collection in the field – of the snow conditions during the winter term. Once a month at a selected site, you will collect snow attributes such as snow depth and temperature. You will also collect a sample in order to establish snow density at various snow pack depths.

2. Till Macro-fabrics

In this assignment you will learn how to plot sedimentary fabric data in order to interpret till's glacial history. The data collection process will be explained in class but the dataset used will come from an existing source – no field work is required.

3. Glacio-Isostasy

This is a map-based exercise involving isostatic rebound, eustatic sea level change and their inter-relationships. Dataset used will introduce you to the various ways of interpreting glacio-isostatic information – including establishing past rates of rebound, latent rebound potential and coastline modification resultant from the interactions between the sea level and continental plate rise.

Course Grading:

Progress Exam	25 %	(Feb. 12)
Midterm Exam	35 %	(Mar. 16)

Final Exam	40 %	
Assignments	up to 15%	(optional*)

*There are 3 optional assignments in this course. Each one is worth 5% and can be used to reduce the weight of either Progress or Midterm exam. For example, a student could choose to reduce the weight of Progress exam by 5% and the Midterm exam by 10% if they completed all 3 assignments. Each lab will have a strict deadline and must be completed before that time. No exceptions will be made.

Course Policies

The following course policies are consistent with those of the Geography Department and Lakehead University.

1. Regular attendance is expected in lectures.
2. Any absence due to illness, disability, or domestic affliction should be reported to the instructor. Absence due to extracurricular activities (e.g. athletics) should be discussed with the instructor **PRIOR** to the absence. If you miss a class, it is your responsibility to obtain the notes from a classmate. I can provide you with any handouts, but will not provide you a repeat of the lecture or my lecture notes.
3. Students with special needs should talk to me at the beginning of the course and register with the Student Success Centre.
4. Tardiness is frowned upon. Be late at your own risk.
5. Assigned readings, when provided, are to be read prior to the next lecture. This will allow you to get the most out of the lectures and ask informed questions.
6. Questions may be asked **anytime** during lectures. I won't be offended.
7. No make-up exams will be given without a medical excuse backed by a medical certificate. No one will be allowed to write the tests or the final exam **prior** to the scheduled date.
8. In order to obtain an up-to-date grade status you must contact me directly in person or email me from your registered LU account (@lakeheadu.ca domain name).
