

Free Public Lecture

Geological Association of Canada

2013-2014 Howard Street Robinson Lecturer

DR. JACOB HANLEY

“The origin and role of volatiles in the formation of magmatic Ni-Cu-platinum-group element deposits: What have we learned from fluid and melt inclusions?”

The Howard Street Robinson Lecturer is chosen by the Mineral Deposits Division and the Precambrian Division of the GAC in alternate years. It is funded by the Robinson Fund of the GAC that was established in 1977, following the bequest to GAC from the estate of Howard Street Robinson, a founding member of GAC. The bequest was “for furtherance of scientific study of Precambrian Geology and Metal Mining.”

Date: **Thursday, November 7, 2013**

Time: **2:00 p.m.**

Place: **CB 3031**
