

ENGLISH INNOVATION PROGRAM

INNOVATION, LEADERSHIP AND ENGLISH FOR ENGINEERING

This is a student-centered program that focuses in developing a basic understanding of concepts in engineering including: force and motion, electricity, pumps, and compressors, as well as sound and light waves.

- Students will have an opportunity to apply their knowledge to everyday situations and develop practical leadership skills to solve problems and improve the world in which we live.
- Learning takes place through a combination of formal classroom instruction and experiential learning as students will interact with guest speakers, visit local companies, and complete group projects related to the content.
- 20 hours of face-to-face class instruction combined with in-class and out-of-class experiential activities that will allow students to demonstrate what they have learned.
